

Serverhousing

Individual care for your serverhousing needs

SITEL, spol. s.r.o offers a possibility of housing servers in CE Colo datacentre, an internationally recognized datacentre located at Prague 10, Nad Elektrárnou 1428/47, 106 00, which meets all requirements for telecommunication technologies and equipment placement.

Largest number of international and national transit carriers and ISPs acting in the Czech Republic are terminated and interconnected within CE Colo datacentre. Up to date list of providers offering connection services can be found [here](#).

Beside the large choice of various IP carriers Sitel´s serverhousing solution allows you to house your equipment in highly secure, neutral and stable environment of well established datacentre. No matter the scope of your installation, you can enjoy all the benefits of one of the leading datacentres in central Europe.

The main benefits of serverhousing services offered by Sitel, spol. s.r.o. are:

- server placement in top quality telecommunication premises meeting the highest requirements (air conditioning, automated inert-gas fire extinguishing system, power supply of AC230V and DC48V backed up by UPS and diesel generators, access through automatic security system, CCTV surveillance etc...)
- flexibility in way of server placement (individual mounting positions in shared cabinets, shelf stand, lockable customer rack portions or entire cabinets) according to customer´s needs
- the possibility to get directly dedicated transit connectivity (up to 1 Gbps), PA allocation, BGP routing, redundant DNS, MX
- 24/7/365 Network Operating Centre on site
- the possibility to order remote reset/turn-on device
- the possibility to get own analogue or digital telephone line for modem or router connection, optionally the placement of MW device to transmission towers with very good optical visibility
- remote-hands services provided by trained field engineers on duty 24/7/365
- easy accessibility and parking
